Administrator launch checklist	25
System-owner operations	26
Pointlabs One at a glance	27

Fastest way to begin

New administrators should follow Chapter 4 in order, then configure access roles and workflows before employees begin submitting requests.

How to use this manual

- Employees: focus on Chapters 2, 8, 9, 10, 11, 13 and 14.
- Reporting managers and workflow approvers: read Chapters 3, 7 and 8.
- HR and system administrators: use the full guide, especially Chapters 4 through 12 and the appendices.
- Screen labels are written exactly as they appear in the current Pointlabs One application wherever possible.

CHAPTER 1

Start here

Pointlabs One is the shared HR workspace for employee information, time, requests, approvals, payroll documents and HR operations.

What the system does

The platform combines employee self-service with protected HR administration. Each person signs in to one responsive web application; the visible navigation and allowed actions depend on the person's account permissions and reporting relationships.

- Employees maintain safe profile details, check attendance, request leave, submit HR services, message colleagues, manage personal tasks and download their own documents.
- Reporting managers and configured approvers decide only the requests routed to them.
- HR manages people records, leave balances, payroll, documents, holidays, requests and reports.
- Configuration administrators manage organisation data, access roles, service types and approval workflows.

Key terms

TERM	MEANING
Designation	A person's job title, such as Software Engineer or Head of Operations. It does not automatically grant system permissions.
Access role	An administrator-created application permission profile. It can grant HR access, configuration access, and act as an approval source.
Reporting manager	The employee selected on a person's record as their direct reporting officer. This relationship can route approvals.
Workflow	A reusable sequence of one or more approval stages for leave or HR requests.
Approval mode	Any means one eligible approver can progress the stage. All means every eligible approver in that stage must approve.

Privacy first

Salary, bank, identity and protected document data must be handled only by authorised users. Never share downloaded records through unsecured channels.

CHAPTER 2

Sign-in, password and profile

Start securely, recover access with a time-limited OTP, and keep the profile fields you are allowed to maintain current.

Signing in

1

Open Pointlabs One

Use the company-provided HTTPS address. Local testers can use `http://127.0.0.1:5000` after the server is started.

2

Enter your identity

The login field accepts either your User ID or your registered work email address.

3

Enter your password

Use the temporary password only for the first sign-in. A newly created account is required to set a personal password before continuing.

4

Open your workspace

After authentication, the Overview shows only data and actions permitted for your account.

Changing a password

Open the profile panel at the bottom of the navigation, select Profile & settings, then choose Change password. Enter the current password and the new personal password. After a successful change, the old temporary password no longer works.

Forgotten password and OTP recovery

1

Choose Forgot your password?

On the sign-in page, open the secure recovery form.

2

Confirm the account

Enter the same User ID or registered email accepted at login, plus the registered email address.

3

Use the latest code

A six-digit OTP is emailed to the registered address. It remains valid for 15 minutes. If a new code is requested, use the latest one.

4

Set a new password

Enter the account identity, verification code and new password. Return to sign-in after the confirmation message.

OTP rejected or expired?

Request a fresh OTP, use it within 15 minutes, and enter the same account identity used on the recovery request. Do not reuse an older code.

Profile self-service

- Employees can update preferred name, work email, personal email, phone and personal address.
- Employment, designation, manager, salary, bank and identity changes remain HR-controlled.
- For a protected change, submit a Personal Information Update from HR requests so the change is reviewed and recorded.
- Use Sign out when leaving a shared device.

CHAPTER 3

Navigation, permissions and responsibilities

The interface is one product, but it adapts to the signed-in person's permissions and approval responsibilities.

Main navigation

AREA	PURPOSE	TYPICAL ACCESS
Overview	Operational summary, current leave, notifications, birthdays and quick actions.	All users; metrics vary by role
My workspace	Private tasks, reminders and sticky notes; HR can publish global notes.	All users
Messages	Private colleague-to-colleague conversations.	All active users
People directory	Search, filter, create, edit, archive and export employee records.	HR / Admin
Attendance	Daily check-in/check-out and recent personal history.	All users
Leave & time off	Balances, requests, edits, cancellations and confirmation PDFs.	All users
HR requests	Certificates, letters, information updates and other services.	All users; HR sees the service queue
My payslips	Secure payslip history and PDF downloads.	Own records; HR sees authorised records
Approvals	Configured workflow decisions and manager/HR queues.	Eligible approvers
Reports	Leave, employee and attendance reporting/export.	HR / Admin
Admin centre / Workflow studio	People operations and configuration.	Authorised HR / configuration users

Who can do what

RESPONSIBILITY	EMPLOYEE	APPROVER / MANAGER	HR / ADMIN
Own profile, attendance, leave, HR requests	Create and maintain eligible own records	Same self-service rights	Same self-service rights
Approve requests	Only if explicitly routed	Decisions assigned by workflow or reporting line	Decisions assigned by workflow plus HR service processing
Employee records and confidential data	No	No, unless separately granted	Authorised access
Configuration	No	Only with configuration access role	Administrator or configured role

Designations are not permissions

A senior job title does not automatically create HR access. Assign a separate access role when a person needs application permissions or workflow responsibility.

CHAPTER 4

Initial organisation setup

Configure reusable organisation data before onboarding the wider team. This order prevents incomplete profiles and unroutable approvals.

Recommended setup sequence

- 1 Entities / companies**
Create the employing companies. Record display name, legal name, two-letter country code and three-letter currency.
- 2 Locations**
Create offices or work locations and connect each one to an entity. Add the country code used for holiday and payslip selection.
- 3 Departments**
Create reusable departments for employee records, reporting and filters.
- 4 Designations**
Create job titles and mark only titles eligible to be selected as reporting officers.
- 5 Access roles**
Create the application permission profiles required for HR, configuration and workflow routing.
- 6 Approval workflows**
Create leave and HR service routes, add their stages, verify eligible approvers, then activate them.
- 7 Employees**
Create accounts and profiles, then assign entity, location, department, designation, reporting manager and access role.
- 8 Leave and payroll configuration**
Set holiday calendars, opening leave adjustments and effective-dated compensation.

Master data rules

- Use stable, recognisable names; avoid duplicates such as Dubai and DXB Office unless they are genuinely separate records.
- Use country code LK for Sri Lanka and AE for the United Arab Emirates where applicable.
- Use LKR and AED as currency codes. These values help select the appropriate payslip context.
- Archive or deactivate referenced records rather than deleting history.

Where to configure

CONFIGURATION	ENTRY POINT
Entities, locations, departments	Admin centre → organisation/master data links
Designations	Admin centre → Designations
Access roles	Workflow studio / administration → Access roles
Approval routes and HR request types	Workflow studio → Approval workflows
Public holidays	Admin centre → Public holiday calendar
Leave balance adjustments	Admin centre → Leave balances

CHAPTER 5

Employee management

Maintain a complete employee lifecycle without deleting historical HR, leave, payroll or document records.

Finding people

Open People directory. Search by name, employee code or email; combine search with department, location and employment-status filters. The list uses stable pagination with 10 people per page by default. Use Export CSV only when you are authorised to handle the resulting data.

Creating an employee

1

Open Add employee

From People directory, choose Add employee.

2

Create the account

Enter full name, unique User ID, temporary password, work email and employee code. A temporary employee code is acceptable when the permanent ID is unavailable.

3

Assign employment data

Set status, dates, employment type, entity, location, department, designation and reporting manager.

4

Assign system access

Leave Standard employee access for most users. Select an administrator-created access role only when required.

5

Complete personal, identity and banking data

Enter verified information. Sensitive fields are protected from normal employee editing.

6

Attach initial documents

Optionally upload multiple PDFs or supported images and provide a document category.

7

Create and hand over

Save the account and give the temporary credentials through a secure channel. The user must change the password at first login.

Editing and employee lifecycle

- Use Edit employee from the employee detail page for HR-controlled corrections.
- Do not assign a person as their own reporting manager. Keep reporting lines current so approvals route correctly.
- Set a resignation date rather than deleting the person. On the effective date, login is disabled while history remains.
- Archive access only when business rules permit. The current administrator cannot archive their own account from the employee page.
- Employee detail links directly to leave balances, salary and payslips, and secure document history.

Before saving

Verify work email, entity/location, designation, reporting manager and access role. These fields directly influence notifications, leave calendars, payroll templates and approval routing.

CHAPTER 6

Designations and access roles

Keep job identity separate from application authority. This is the foundation of safe and flexible workflow design.

Managing designations

1

Open Designations

From Admin centre, open the designation catalogue.

2

Add a job title

Enter the exact job title used by Pointlabs.

3

Set reporting eligibility

Tick This designation can be a reporting officer only when holders of that title may be selected as reporting managers.

4

Maintain the catalogue

Use the row action to change reporting-officer eligibility when organisation responsibilities change.

Creating an access role

1

Open Access roles

Use the administration/configuration navigation.

2

Name and describe the role

Examples include People Operations or Payroll Administrator. Describe the business access it provides.

3

Choose privileges

Grant HR operational access to users who manage protected HR work. Grant configuration access only to users who manage master data and workflows.

4

Save and assign

Create the role, then assign it on the employee's Edit employee screen.

5

Archive safely

Archive an obsolete role rather than deleting it. Existing assignments and historical approvals remain traceable.

Least privilege

Give each person only the access needed for their current responsibilities. Review access after promotions, transfers, leave cover and resignations.

A practical separation

PERSON	DESIGNATION	ACCESS ROLE	REPORTING MANAGER
Software engineer	Senior Software Engineer	Standard employee	Head of Engineering
HR specialist	People Operations Executive	People Operations (HR access)	Head of Operations
Workflow approver	Finance Manager	Finance Approval	Chief Finance Officer

CHAPTER 7

Workflow Studio: create approval routes

Build administrator-managed, sequential approval routes without hard-coding employee names, roles or job titles into the application.

Create a workflow

1

Open Workflow studio

The link appears for the system administrator and access roles allowed to manage configuration.

2

Create a route

Enter a unique workflow name, choose Leave requests or HR service requests, add a clear description, and create the workflow.

3

Add the first stage

Choose the stage rule and approver source. Complete the corresponding designation, access role or named employee field where required.

4

Add later stages

Use Add next stage. Each new stage is placed after the previous one; the system activates them sequentially.

5

Validate approver availability

Confirm that every stage resolves to at least one active eligible person for likely requesters.

6

Activate

A route cannot be activated without a stage. Activate only after the full path has been checked.

Approver sources

SOURCE	HOW IT RESOLVES	BEST USE
Designation	All active employees currently holding the selected designation.	Department or leadership approvals independent of named individuals
Access role	All active users assigned the selected application role.	Finance, HR or specialist approval groups
Direct manager	The requester's assigned reporting manager.	First-line leave or operational approval
Any HR administrator	All active users with HR operational access.	HR review queue
Named employee	One specifically selected active person.	A stable, exceptional approval responsibility

Stage rules: Any versus All

RULE	RESULT
Any one approver	The first eligible approval completes that stage; other pending decisions in the same stage are skipped.
All eligible approvers	Every eligible person in the stage must approve before the workflow proceeds.

WORKFLOW EXAMPLES

Three reliable patterns

Choose the simplest route that satisfies the real decision process. Complexity adds waiting time and maintenance.

Example A: direct manager only

STAGE	MODE	SOURCE	OUTCOME
1	Any	Direct manager	The employee's assigned manager can approve, reject or ask for more information.

Example B: manager, then HR

STAGE	MODE	SOURCE	OUTCOME
1	Any	Direct manager	Manager reviews operational coverage.
2	Any	Any HR administrator	HR completes policy and record review.

Example C: parallel finance approval, then HR

STAGE	MODE	SOURCE	OUTCOME
1	All	Finance Approval access role	Every active person in the finance approval group must approve.
2	Any	Any HR administrator	Any eligible HR user can complete the final approval stage.

Decision outcomes

- Approve progresses the current stage. If it is the last required decision, the business request moves to its approved state.
- Reject ends the approval instance and records the approver's comment.
- More information required returns the request to the creator. The creator edits or responds, then the same recorded stage becomes active again.
- Every decision is tied to its approver, stage and timestamp. In-flight requests preserve their original workflow history.

Route selection rule

Keep one general leave workflow active. For HR services, keep one general route active and assign service-specific routes directly to request types when needed. This prevents competing active routes from creating an unexpected path.

No eligible approvers

A request cannot start when a required stage resolves to no active person. Check the employee's reporting manager, assigned designations, access-role membership and active account status before activating the route.

CHAPTER 8

Leave and time off

Employees can see balances, submit and correct leave, receive multi-stage decisions, cancel requests safely and retain official confirmation documents.

Before employees submit leave

- HR assigns correct entity/location so the right public holidays are excluded.
- HR verifies the date of joining, probation end date, resignation/notice status and reporting manager.
- HR reviews the employee's yearly balances and records any authorised opening or correction adjustment.
- Configuration administrators activate a valid leave workflow, or HR ensures the reporting-manager fallback is correct.

Submit leave

- 1 Open Leave & time off**
Review the displayed annual, sick and other available balances.
- 2 Choose leave type and dates**
The system calculates working days after excluding weekends and applicable public holidays.
- 3 Add context**
Enter a handover or reason that helps the approver make a decision.
- 4 Submit**
The request appears in history and the first configured approver receives an in-app notification.

Rules applied by the current system

- Annual leave is unavailable before the recorded probation end date.
- Leave is blocked during a recorded notice period.
- A period with no working days cannot be submitted.
- When a non-LWP request exceeds the available balance and Leave Without Pay is active, it is recorded as LWP for review.
- Approved leave reduces the relevant balance only once.

Edit, return, reject and cancel

CURRENT STATE	EMPLOYEE ACTION	APPROVER / HR ACTION
Submitted or returned	Edit dates/type/reason, or cancel the pending request.	Approve, reject, or request more information.
Approved	Request cancellation and provide a reason.	Approve or decline cancellation.
Cancellation requested	Wait for the decision.	Approval restores the applicable balance; decline keeps leave approved.
Rejected / cancelled	View history; no further editing.	History remains available.

Leave Confirmation PDF

A final approval generates one official Pointlabs Leave Confirmation PDF with employee, leave, approver, dates, duration and reference details. The employee, authorised HR and the reporting manager can download it. If the approved leave is later cancelled, the original document remains for audit history.

CHAPTER 9

HR service requests

Use the service desk for certificates, letters, document copies, personal information changes and administrator-defined HR services.

Create and follow a request

1

Open HR requests

Employees may see the label Other requests; HR sees the shared HR requests queue.

2

Select a request type

The list is managed in Workflow Studio. Choose the service that best matches the need.

3

Add subject and details

Include relevant dates, recipient requirements and context. Do not place passwords or unnecessary identity data in free text.

4

Submit

If the service type has a workflow, it enters that route. Otherwise HR receives the service notification.

5

Open the request detail

Track status, read public activity, add comments, edit eligible fields and respond to information requests.

Employee controls

- The creator can edit a Draft, Submitted, More Information Required or Resubmitted request.
- A request needing more information can be updated and resubmitted into the recorded approval stage.
- The creator can cancel a non-final request. Cancellation preserves history instead of deleting the record.
- Completed, cancelled and rejected requests are read-only to the employee.

HR processing

STATUS	WHEN TO USE
In review	HR has opened the request and is checking requirements.
More information required	The employee must provide missing or corrected information.
In progress	HR is actively preparing or coordinating the service.
Completed	The requested service or final document has been delivered.
Rejected	The request cannot be fulfilled; a clear employee-facing reason should be recorded.

HR can add a public comment that the employee sees, or an Internal HR note visible only to authorised HR users. When a status changes, the employee receives an in-app notification and, where configured, a branded email.

CHAPTER 10

Attendance

Record the current workday in a simple personal timeline and export an authorised attendance register for HR.

Daily employee use

1

Open Attendance

The Today card shows whether the current workday is not started, open or complete.

2

Check in

Add an optional note such as office, remote work or client visit, then choose Check in now.

3

Check out

At the end of the workday, add an optional handover note and choose Check out.

4

Review history

The recent history lists up to the last 20 workdays and distinguishes open from completed days.

HR attendance export

Authorised HR users can export the attendance register from the administration/reporting area. Store exported files securely because they contain employee working-time information.

Time display

The current attendance screen identifies its recorded time as UTC. Operational teams should agree how UTC records are interpreted for local working hours.

CHAPTER 11

Payroll, compensation and payslips

Record effective-dated compensation, generate versioned monthly payslip PDFs and deliver them securely.

Record compensation

- 1 Open Admin centre → Payroll & compensation**
Filter or select the employee whose salary record must be maintained.
- 2 Choose an effective date**
Each revision becomes part of the compensation history; do not overwrite past payroll facts.
- 3 Enter salary components**
Record currency, basic salary, allowances, other earnings and the applicable deductions.
- 4 Review calculated totals**
Gross salary, total deductions and net salary are derived from the recorded components.
- 5 Save the revision**
The dated record becomes the applicable source for payroll periods on or after its effective date until a later revision applies.

Generate a monthly payslip

- 1 Select payroll year and month**
The payroll screen lists eligible employees and the compensation record applicable to that period.
- 2 Review before generation**
Check employee entity/location, currency and every earning/deduction input.
- 3 Generate PDF**
The server creates a private, branded A4 PDF and stores a random internal filename. Generation must succeed before the record is marked Generated.
- 4 Deliver**
The employee receives an in-app notification. If SMTP is configured and the employee has an email, the branded email includes the confidential PDF attachment.
- 5 Correct through a new version**
Generating the same month again creates the next version. Older versions remain in history for auditability.

Sri Lanka and UAE templates

CONTEXT	SELECTION	KEY COMPONENTS
Sri Lanka	Employee entity/location country is not AE	Pointlabs Technologies Pvt Ltd · LKR · Basic, allowances, other earnings, WHT, EPF, PAYE, other deductions
UAE / Dubai	Employee entity or location country is AE	Pointlabs Technologies Ltd · AED · Basic, allowances, other earnings and other deductions
Confidential delivery	Employees can download only their own payslips. HR/Admin access is server-authorised. Never send a payslip to an unverified or personal address without approved company procedure.	

CHAPTER 12

Documents and compliance

Store employee PDFs and images privately, link them to the right employee, and monitor critical identity-document expiry dates.

Upload employee documents

1

Open Documents

Administrators can select the target employee; an employee sees only their own library.

2

Choose a category

Use a clear label such as Passport, Emirates ID, visa, qualification or employment contract.

3

Choose the file

Supported images and PDF files are accepted. Images are optimised and stored as WebP; PDFs retain their original format.

4

Upload

The record is associated with the employee profile and becomes available only through authenticated, permission-checked download routes.

Upload during onboarding

The Add/Edit employee form also supports multiple documents. Provide a document category and choose the relevant files before saving the employee.

Compliance reminders

Passport and Emirates ID expiry dates in the employee record are monitored by the scheduled compliance process. It creates once-only reminders at configured thresholds for the employee and authorised HR users.

Storage rule

Do not place employee documents, generated payslips or leave confirmations in public static folders. Use only the application's secured upload and download flows.

CHAPTER 13

Messages, notifications, email and birthdays

Keep operational communication attached to the right user and event while preserving a clear in-app record.

Direct messages

1

Open Messages

The conversation list shows active colleagues.

2

Choose a colleague

Open the existing thread or start a new one.

3

Write and send

Messages are private to the sender and recipient. Use HR requests—not chat—for formal service or record changes.

In-app notifications

- Notifications are created for leave submissions and decisions, workflow actions, HR request updates, payslip availability, task reminders, birthdays and document-expiry reminders.
- The Overview and inbox areas surface unread or priority activity.
- A business transaction remains recorded even when email is temporarily unavailable; email failure must not be mistaken for process failure.

Branded email

Where SMTP is configured, Pointlabs-branded emails support password OTPs, workflow notices, leave decisions, direct-message alerts, birthdays and payslip/leave document delivery. PDF attachments are confidential and must go only to the employee address associated with the record.

Birthday operations

The birthday screen shows celebrations occurring in the next three days. The scheduled process notifies administrators three days before and sends the birthday email on the birthday when the employee has a work email. Voucher details can be associated where configured.

CHAPTER 14

My workspace: tasks and sticky notes

Create a lightweight personal work system inside Pointlabs One without mixing informal reminders into formal HR records.

To-do list

1

Add a task

Enter a short action title and, optionally, a due date and time.

2

Complete or reopen

Use the check control to toggle completion.

3

Delete

Remove a personal task when it is no longer useful. Formal HR tasks should remain in their proper workflow instead.

4

Receive a reminder

When the scheduled reminder process runs, a due incomplete task creates a once-only in-app reminder.

Sticky notes

- Create a short note and choose gold, green or rose.
- Select Show on my screens to keep a personal note visible across the application.
- Authorised HR users can select Show on every employee workspace for a company-wide note.
- Remove notes when they are no longer current. Global notes should be concise and time-sensitive.

Use the right channel

Tasks and notes are reminders, not approval evidence. Keep leave, employee changes, HR services and payroll actions in their formal modules so history remains auditable.

CHAPTER 15

Reports and exports

Use protected operational reporting for decisions, reconciliations and controlled offline analysis.

Reports available

REPORT	USE	OUTPUT
Reports dashboard	Active employees, leave awaiting decision, approved leave and period activity.	On-screen
Leave Summary	Entitled, accrued, utilised and available annual/sick balances for a selected year/period.	CSV
Leave activity	Request dates, working days, type, status and available confirmation document.	On-screen / CSV
Full employee detail	Protected employee information for authorised HR analysis.	CSV
Attendance register	Employee check-in and check-out records.	CSV

Run a leave-period review

1

Open Reports

The page is available only to authorised HR users.

2

Set From date and To date

Choose the exact reporting period and apply it.

3

Review metrics and rows

Check totals, leave status, duration and confirmation-document availability.

4

Export the correct dataset

Use Leave summary CSV for balance analysis or the leave activity export for request-level analysis.

5

Protect the export

Store it in an approved location and delete local copies when no longer required.

Balance interpretation

Entitlement, accrual, utilised leave, adjustments and available balance are separate values. Do not treat a sum of request rows as the employee's authoritative remaining balance.

CHAPTER 16

Operating checklists

Use these short routines to keep the HR workspace accurate and prevent pending work from becoming invisible.

Employee: daily or as needed

- Check Overview for personal notifications and returned requests.
- Check in and out from Attendance according to company practice.
- Keep contact details current and use HR requests for protected changes.
- Respond promptly when an approver or HR requests more information.
- Download payslips and leave confirmations only to a trusted device.

Approver / reporting manager: daily

- Open Approvals and review only decisions assigned to you.
- Check dates, working days, handover context and team coverage before a leave decision.
- Use More information required when facts are missing; explain exactly what is needed.
- Add a clear reason when rejecting or declining a cancellation.

HR: weekly

- Review pending leave, cancellation and HR service queues.
- Check new starters, future resignations, document expiry and missing reporting managers.
- Reconcile leave-balance adjustments against approved references.
- Confirm public holidays for each active entity/location.
- Review access assignments and archived accounts.

HR / payroll: monthly

- Confirm current compensation revisions before selecting the payroll period.
- Validate currency and Sri Lanka/UAE template selection for each employee.
- Generate, inspect and deliver payslip PDFs; correct errors through a new version.
- Export required reports, reconcile totals and protect downloaded data.

CHAPTER 17

Mobile use, theme and installation

Pointlabs One is responsive and installable as a Progressive Web App, while retaining the same permission controls as the desktop experience.

Mobile navigation

- Use the menu button to open the navigation drawer. Choose a destination or use the visible close button; tapping the page backdrop also closes the drawer.
- Tables may scroll horizontally or adapt into smaller layouts. Use landscape orientation when reviewing wide HR data.
- Keep the device locked and sign out before lending it to another person.

Light and dark theme

Use the theme control in the top bar to switch between the light green/white workspace and the dark Pointlabs theme. The preference is retained by the browser.

Install as an app

1

Open the secure production site

PWA installation should be performed from the HTTPS deployment, not an untrusted copy.

2

Use the browser install action

In Chrome/Edge, choose Install when offered or use the browser menu's Install app option. On supported mobile browsers, use Add to Home Screen.

3

Launch from the app icon

The installed app opens Pointlabs One in its own window and still requires authentication.

4

Refresh after an update

If a newly released interface looks mixed or outdated, close all app windows and reload once so the new service-worker cache takes effect.

CHAPTER 18

Troubleshooting

Resolve common user and configuration issues without bypassing security or damaging business history.

SYMPTOM	CHECK	SAFE ACTION
Valid email cannot sign in	Confirm it is the registered work email and the account is active.	Try the unique User ID; ask HR to verify the account email and status.
OTP says invalid or expired	Code age, latest code, and account identity.	Request a new OTP and use it within 15 minutes.
No approver receives a request	Active workflow, stage source, employee manager and active eligible users.	Correct configuration before resubmitting; do not approve directly in the database.
Leave has zero working days	Weekend and applicable holiday calendar.	Choose dates containing working days or correct the holiday scope.
Leave changed to LWP	Available balance compared with requested working days.	Ask HR to verify balance/adjustments before approval.
Payslip cannot be generated	Applicable compensation record, payroll period and employee country/currency.	Correct the source data and generate a new version. Do not claim delivery when PDF generation failed.
Email not received	Registered email, spam folder and SMTP status.	Use the in-app record; HR can resend an existing payslip PDF when available.
Old or broken interface after release	Browser/PWA cache.	Hard refresh, close installed app windows, or clear only the site's cached data.
Forbidden response	Signed-in identity and required permission.	Return to your permitted workspace; ask an administrator to review access rather than sharing credentials.

When escalating an issue

Record the time, user ID, page, action, displayed message and relevant business reference. Do not include passwords, OTPs, full bank data or identity numbers in screenshots or support messages.

CHAPTER 19

Security and data-handling guide

Pointlabs One contains confidential employment, payroll, banking, identity and leave information. Good operational habits are part of the control system.

Required practices

- Use a unique personal password and never share your login, password or OTP.
- Grant HR and configuration access through administrator-created access roles using least privilege.
- Verify the selected employee before uploading a document, changing a balance or generating a payslip.
- Download sensitive exports and PDFs only when needed and store them in approved encrypted locations.
- Never send payslips, bank details or identity documents through public links or unapproved messaging channels.
- Use archive, resignation and cancellation workflows instead of deleting historical records.
- Review audit history after sensitive corrections or unexpected workflow outcomes.
- Keep production debug mode disabled and store SMTP/database/secret values only in protected environment configuration.

Access boundaries enforced by the system

DATA / ACTION	BOUNDARY
Payslip PDF	Employee owner or authorised HR/Admin only
Leave Confirmation PDF	Employee owner, reporting manager or authorised HR/Admin only
Employee document	Employee owner or authorised administrator according to the document route
HR request	Creator and authorised HR; internal HR notes remain hidden from employees
Workflow decision	Only the specifically assigned active approver can act
Salary, bank and identity fields	HR-controlled; employee uses an audited update request

CHAPTER 20

Status reference and quick actions

Use consistent status language to understand where work is and what action is permitted next.

Leave statuses

STATUS	MEANING	NEXT ACTION
Submitted	Waiting for the current approver.	Employee may edit/cancel; approver decides.
Returned	More information is required.	Employee updates and resubmits.
Approved	Final approval completed and balance applied.	Download confirmation or request cancellation.
Rejected	The request was declined.	Review comment; create a new request if appropriate.
Cancellation requested	An approved leave cancellation awaits review.	Manager/HR approves or declines.
Cancelled	The leave is no longer active.	History and any original confirmation remain.

HR request statuses

STATUS	MEANING
Submitted	Received and awaiting approval or HR review.
More information required	Employee response is required.
Resubmitted	Employee supplied an update after HR feedback.
In review	HR is evaluating the request.
In progress	The service is actively being prepared.
Completed	The service is finished and final history is retained.
Cancelled / Rejected	Closed without completion; the audit trail remains.

CHAPTER A

Administrator launch checklist

Complete this checklist before inviting the wider team or enabling automated email delivery.

■	Production database configured and migrations applied without resetting existing data.
■	Unique production SECRET_KEY set; debug mode disabled.
■	HTTPS deployment and secure session environment confirmed.
■	Entities, locations, country codes and currencies verified.
■	Departments and designations reviewed; reporting-officer eligibility set.
■	Access roles created and assigned using least privilege.
■	Leave and HR service workflows contain eligible approvers and are active.
■	HR request service catalogue reviewed.
■	Employees have verified email, entity/location, designation and manager.
■	Opening leave balances and public holidays recorded.
■	Compensation records verified before first payroll run.
■	SMTP tested with a controlled internal address; no real employee test blast performed.
■	Birthday, task-reminder and compliance scheduler jobs configured.
■	Payslip and Leave Confirmation PDFs generated and access-tested.
■	Backup, restore, log monitoring and authorised support ownership confirmed.

CHAPTER B

System-owner operations

Technical commands for the authorised maintainer. Run them from the project root using the configured virtual environment and production environment variables.

Local start

Development command	Activate the project virtual environment, then run: <code>python run.py</code> . The default local address is <code>http://127.0.0.1:5000</code> . The development database is SQLite unless <code>DATABASE_URL</code> overrides it.
----------------------------	--

Database setup and migration

TASK	COMMAND
Apply existing migrations	<code>flask --app run:app db upgrade</code>
Initial local tables only	<code>flask --app run:app init-db</code>
Seed local reference data	<code>flask --app run:app seed-demo</code>

Do not run demo seeding or destructive database commands against production data unless the deployment procedure explicitly requires and protects that action.

Scheduled processes

PROCESS	COMMAND	SUGGESTED SCHEDULE
Birthday reminders/email	<code>flask --app run:app process-birthdays</code>	Daily
Due task reminders	<code>flask --app run:app process-reminders</code>	Every few minutes
Passport / Emirates ID expiry	<code>flask --app run:app process-compliance</code>	Daily

Environment configuration

- `DATABASE_URL`: production database connection.
- `SECRET_KEY`: long, random production-only secret.
- `SMTP_HOST`, `SMTP_PORT`, `SMTP_USERNAME`, `SMTP_PASSWORD` and `SMTP_FROM`: branded email delivery.
- `FLASK_CONFIG=production`: enables the production configuration, including CSRF protection.

Secret handling	Never place real passwords, SMTP app passwords, database credentials or production secret keys in this manual, source control, screenshots or support tickets.
------------------------	--

READY REFERENCE

Pointlabs One at a glance

A secure process is a complete process: correct data, correct approver, recorded decision, protected document and clear notification.

I NEED TO...	GO TO...
Update my phone or address	Profile & settings
Request leave or cancel approved leave	Leave & time off
Request a certificate or data update	HR requests
Respond to an approver	Open the returned leave or HR request
Approve assigned work	Approvals
Add or edit an employee	People directory
Correct a leave balance	Admin centre → Leave balances
Add a country holiday	Admin centre → Public holiday calendar
Record salary or generate a payslip	Admin centre → Payroll & compensation
Create a multi-stage route	Workflow studio → Approval workflows
Create HR/configuration permissions	Access roles
Export leave or employee data	Reports

Document control
